

Early-Season High-Oil Corn GT

Designed to Grow. Made to Attract.

High-oil corn contains significantly higher fat and calorie content compared to standard yellow corn – enhancing palatability and energy intake for deer and other wildlife. It's like adding "butter to the popcorn" – more flavor, more attraction, and better nutrition.

@buckheadwildlife

Product Overview

Buck Head Wildlife Early-Season High-Oil Corn is designed to give your deer food plot a powerful nutritional start to the season. This hybrid offers dependable performance, great standability, and the attraction power that comes from higher oil content – providing deer with more energy, fat, and overall feed value.
