

# Late-Season High-Oil Corn GT

## Designed to Grow. Made to Attract.

High-oil corn contains significantly higher fat and calorie content compared to standard yellow corn – enhancing palatability and energy intake for deer and other wildlife. It's like adding "butter to the popcorn" – more flavor, more attraction, and better nutrition.

### Makes the Deer Go Crazy!

#### Product Overview

Buck Head Wildlife Late-Season High-Oil Corn is built to deliver exceptional attraction and nutrition through the entire hunting season. This hybrid offers strong agronomics with impressive height, excellent disease resistance, and large, heavy ears that hold late into fall – keeping deer coming back when it matters most.

#### Key Features

- High-Oil Hybrid – Delivers increased fat and calorie content for better deer energy and condition.
- Tall Plant Structure – Provides excellent field presence and late-season visibility.
- Good Disease Resistance – Stands strong and healthy through maturity.
- Large Ear Size – Produces heavy ears packed with high-energy kernels.
- Glyphosate-Tolerant (GT) – Simplifies weed management for clean, productive plots.
- Consistent Performer – Reliable yield and attraction season after season.

#### Planting Information

- Bag Size: 30,000 kernels (plants approx. 1 acre)
- Bag Weight: 11–15 lbs
- Planting Depth: 1.5" – 2" in moist soil
- Planting Window: April through June
- Soil Type: Adapts well across a wide range of conditions
- Weed Management: Glyphosate-tolerant for simple, effective weed control
